POWER ELECTRONICS

Course Learning Outcomes

After the successful completion of the course, the student will be able to-

Course Learning Outcome	Description
CO 1	Explain the operating principle of Basic power electronic devices
CO 2	Solve complex engineering problems on PE devices and converters, switching pattern for inverter control circuits
CO 3	Analyze the model of uncontrolled and controlled single phase and three phase rectifiers.
CO 4	Verify the design of regulated power supplies.
CO 6	Distinguish among DC and AC converters and their applications, operations and impacts in real world engineering problems including the economic and environmental impacts
